

TourGuideLite

Guide Quick-Start

Everything you need to run your first live tour in about a minute. No app to install — it all runs in your phone or laptop browser.

1

1. Open the Guide page

Open the Start a Tour page:

 [Start a Tour →](#)

2

2. Sign in with Google

Guides sign in with a Google account — this is how your credit balance is saved and protected. Guests never need to sign in.

3

3. Check your credits

Your balance shows at the top of the page. 1 credit = 1 tour, and credits never expire. Out of credits? Tap **Buy More Credits** and pay with PayPal, Bitcoin/Lightning, or redeem a voucher code.

4

4. Create your tour

Tap **Create Tour (1 credit)**. TourGuideLite generates a **6-digit room code** and a QR code — this deducts exactly 1 credit.

5

5. Share the code with your group

Show the QR code for guests to scan, or simply tell them the 6-digit code. They open the join page and type it in — no app, no sign-in, no cost to them.

6

6. Put on headphones and talk

Allow microphone access when your browser asks. Speak normally — your voice streams live to everyone connected. The guest counter shows how many people are tuned in.

■ Use headphones while guiding.

Playing your own voice out of a speaker while the mic is live causes an echo for every guest. Wired or Bluetooth headphones both work fine.

When the tour is over, tap **Stop Tour**. That's it — see the back of this guide for optional features and troubleshooting.

TourGuideLite

Tips, Extras & Troubleshooting

Optional features

■ Room password

Under **Preferences**, set a password before creating your tour to keep your room private. Leave it blank for an open room anyone with the code can join.

■ Audio quality

Also under **Preferences**: choose the sample rate (48 kHz recommended) and toggle echo cancellation / noise suppression. Defaults work well for most tours.

■ Play a sound clip

Once live, open **Play a sound clip** to mix an MP3 (music, intro, sound effect) in with your microphone. Only you hear the controls; guests hear the mix. Nothing is uploaded — the file stays in your browser.

■ Custom background

Open **Customize background** to push an image, color, or URL to every connected guest's screen — handy for showing a photo, map, or logo while you talk.

■ Guest count

The live counter on your screen shows how many people are currently connected, so you always know your audience size.

Buying credits

Tap **Buy More Credits** any time. Choose a package, then pay with **PayPal**, **Bitcoin / Lightning** (scan the QR or copy the invoice), or redeem a **voucher code** (request one at wificlashroom@gmail.com). Credits land on your account as soon as payment is confirmed and never expire.

Troubleshooting

No microphone prompt / can't start a tour

Make sure you're on the <https://> address and using Chrome or Firefox. Check your browser's site permissions and allow microphone access.

Guests can't hear anything

Confirm they entered the exact 6-digit code and that the tour is still running (you haven't tapped Stop Tour). Ask them to check their device volume and try reloading the join page.

Credits didn't appear after paying

Give it a few seconds after payment confirms. If they still don't show, check your payment provider for a successful charge, then email wificlashroom@gmail.com with the payment details.

Questions? Write to wificlashroom@gmail.com — we're happy to help.
